Canterbury Nurseries, Inc.

EASTON • MARYLAND

Pyramidal forms of *Buxus sempervirens* as grown at Canterbury Nurseries

CANTERBURY BOXWOOD has achieved an enviable reputation for color, bushiness of plants, and general good qualities. These characteristics are found in all plants, whether small or large. Even the smallest plants used for edgings will be found as perfect as are the larger specimens.

The chief object at Canterbury Nurseries is to maintain at all costs the **QUALITY OF THE STOCK**. A trained organization, plus adapted soil, a favorable climate, and quantity production, permit us to furnish these high-quality plants at most reasonable prices. Moreover, our enormous stock of varying sizes permits the most careful selection for all orders, and the rejection of all plants that do not conform to the Canterbury standard.

Climate, clay-loam soil, ample capital, and an organization schooled in specialization have here conspired to produce Boxwood superior in all ways. Pound for pound of foliage, our plants undersell all others. That is why our business ever mounts to larger sales each season. We do not boast that every plant we grow is perfect. But—and here is the crux of the matter from the buyer's point of view—our stock is large enough to ship only selected plants. Never do we dig them “as they run.”

Selected plants of Canterbury Boxwood will be sent in each order. An enormous stock permits us to hold to specified sizes, and our pride in the name of Canterbury is so great that an inferior plant is not permitted to leave the place. Buyers can put implicit confidence in our selection.

This enormous supply of *Buxus suffruticosa* is evidence that plants are selected for each order

Buxus suffruticosa

Unrivalled for edgings and low hedges. It is slow-growing and therefore remains dwarf for a long time. In the old gardens of the South, notably in Virginia and Maryland, *BUXUS SUFFRUTICOSA* has attained a large size, often 6 feet or more in height and diameter.

For edgings of formal gardens, small plants (4 to 5, or 5 to 6 inches) are quite satisfactory. For low hedges, plants 14 inches or over give immediate effect.

Buxus sempervirens

This species is adapted to hedge planting, and is probably used more than any other member of the family. It grows well over the eastern part of the country, can be clipped to definite height, or allowed to grow naturally. Likewise, it retains its rich green color all the year. It would be futile to attempt to limit the use of *BUXUS SEMPERVIRENS*—it fills a valuable place in all landscape work.

WHOLESALE PRICES FOR FALL, 1931

Quantity production permits us to readjust prices in line with the present-day tendency to revisions downward.

SELECTED PLANTS of Canterbury Boxwood will be sent on each order. An enormous stock permits us to hold to specified sizes, and our pride in the name of Canterbury is so great that an inferior plant is not permitted to leave the place. Buyers can put implicit confidence in our selection.

PLEASE NOTE that our prices are f.o.b. Easton, Maryland, **WITHOUT ADDED COSTS**, unless specially mentioned. We make **NO** charge for packing.

Except where noted as **B&B**, an extra charge will be made for digging with ball and burlapping. Packing is free.

OUR TERMS are 60 days net, or 2 per cent 10 days. Upon proper credit reference, open account will be made; otherwise cash must accompany the order.

TRUCK DELIVERY can be made to most points on the eastern seaboard. We shall be glad to quote on lots delivered to the planting-point. Such shipping will insure arrival of plants within 10 to 24 hours after digging in the fields.

Quotations are made and orders accepted subject to stock on hand and unsold. All agreements and contracts are made subject to loss by the elements or other unavoidable causes. We use all possible care but cannot assume any responsibility after shipment has been delivered to carrier. We give no warranty, expressed or implied, as to description, quality, productiveness, or any other matter of any nursery stock or plants we sell.

*Special prices for large quantities

Canterbury Boxwood

is foliated clear to the center—not a mere outer shell of green.

CANTERBURY BOXWOOD has a great mass of fibrous roots, thus insuring good growth under severe conditions. This invisible quality below the soil equals in all respects the quality that is open to daily inspection.

Each Canterbury Boxwood plant shipped is a selected specimen, and not dug "as they run."

Extra care is taken in grading. It is our aim to give **MORE** than is represented, and to make Canterbury Boxwood the best obtainable.

Canterbury Boxwood is produced by trained growers, and backed by an organization that gives undivided attention to the production of one line—Boxwood.
